

FPG FlexCloud

If the sky is the limit, then the Cloud is your starting point!

The **FPG FlexCloud** offers complete end-to-end private, Public and Hybrid Cloud build out and management solutions, fully flexible and customised to support business needs and existing infrastructure to the extent possible.

FlexCloud Solution Modules

<p>FlexCRS</p> <p>A Cloud Readiness Service that enables organisations analyse and understand their position on the Cloud spectrum, while preparing for Cloud evolution.</p>	<p>FlexV</p> <p>Virtualizing IT infrastructure to increase business agility, reduce costs and enable rapid service provisioning. FlexV brings organisations closer to their cloud destination.</p>	<p>FlexCat</p> <p>A Cloud Service Catalogue development solution delivering well defined, documented and automated services. This enable self-service</p>	<p>FlexPortal</p> <p>Transforms virtualised datacentre into an intuitive and flexible self-service portal where all integral IT business services can be consolidated and delivered to users.</p>
---	---	--	--

FlexCloud examines the state of an existing Infrastructure, seeking to assess the business processes, services, people and their suitability for cloud migration. Also, business targets, challenges and possible opportunities to determine the style, scope, strategy and deployment methodologies best suited to the organization’s private Cloud ambition.

FlexCloud empowers the organization by eliminating the challenges of building and maintaining a highly complex cloud infrastructure by delivering robust, flexible, simple and functional Private cloud solutions, giving businesses unprecedented agility.

Also, FlexCloud enables organizations consolidate, maximize and optimize their Infrastructure assets utilization, enhance business efficiency, agility and reliability of IT services by transforming siloed Datacentres into a consolidated virtual cloud environment. Using the modular approach. FlexCloud solutions suite delivers unique turnkey Cloud solutions (modules) enabled to make the transition to cloud simple and seamless.

Key Benefits

- A concrete foundation to enable seamless movement into the Cloud environment, thereby minimising risk of project failure and costly reruns.

- Rapid creation and deployment of IT services to fuel faster business response and growth.
- Optimised infrastructure and improved efficiency leading to reduced costs and long term ROI.
- Faster time to market and improved business service availability.
- Unrivalled reliability, security and business continuity possibilities.
- Possible revenue generation and opportunities.
- Lower TCO and predictable cost-models.
- Improved capacity management and unprecedented operational scalability.

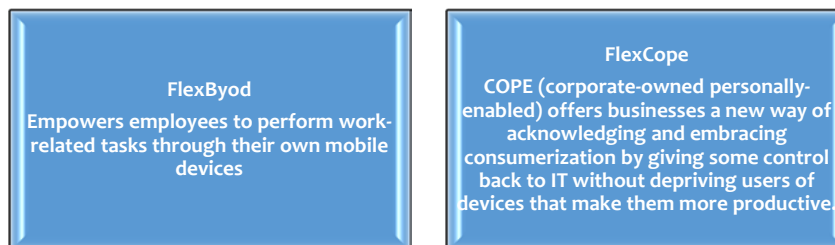

FPG FlexMobile

FlexMobile offers Mobile Device Management (MDM), Mobile Application Management (MAM) and Mobile Data Management, including fully comprehensive on-demand mobile device, mobile application, data sync/sharing and management solution, delivering full deployment and security integration for smart devices including tablets and phones of all flavours.

FlexMobile helps customers achieve unprecedented high levels of productivity by enabling the ability to work from anywhere and from any device.

FPG's partnerships with Citrix XenMobile, VMware Airwatch, Microsoft Intune and IBM MaaS360 delivers improved productivity, reduced cost and high levels of staff satisfaction.

FlexMobile Solution Modules

Key Benefits

- Gain competitive advantage and drive top-line growth.
- Unprecedented increase in productivity.
- Support business growth and scalability.
- improved operational efficiency and customer service.
- Improved visibility and easy achievement of compliance with diverse devices.
